KEY TIME-OF-USE SUPPLEMENT: FOR TRANSPORT

STRESSGUARD: CALMER ON THE TRUCK, BETTER ON ARRIVAL.

For calming livestock naturally. The product long-time customers know as **Green Cap** - same trusted formulation, new name.

NIL WITHHOLDING | EVERY BATCH NATA TESTED | 3-YEAR SHELF LIFE | FEEDSAFE ACCREDITED

StressGuard does two main jobs at once. It helps naturally calm livestock so they travel better through yarding and transport, and it supports immune function at exactly the point stress knocks it down, when animals are most likely to go backwards. Backed by **16 amino acids, 10 chelated trace minerals and elevated natural electrolytes**, it helps protect the condition you've already paid to put on. Every kilogram an animal loses on the truck is a kilogram you've already grown.

TRANSPORT BENEFITS

- **Calmer stock travel better** – helps lower stress from the yards through to unloading.
- **Stress and immune support in one dose –** copper, zinc and selenium, with key amino acids help maintain immune function when stress suppresses it.
- **Less shrinkage** – helps reduce weight loss in transit.
- **Stays hydrated on the move** – natural electrolytes assist hydration and help animals hold condition through travel.
- **Supports MSA grading** – aids in reducing dark cutters.
- **Back onto feed faster** – helps animals through the "dead gut" that follows a rough trip, supporting a more efficient return to feed & water on arrival.
- **Flexible application** – for best results use in the water supply with the ProDispenser, but can also be mixed with feed or poured on hay.

TIMING IS EVERYTHING

Dose 3-7 days prior to trucking

7	6	5	4	3	2	1	LOAD
DAYS OUT: DOSE WINDOW						TOO LATE	

Never within 24 hours of loading. The product needs time to be absorbed in the system before stress hits.

ONE DOSE IS ALL THAT IS REQUIRED.
1 dose lasts up to 6 weeks.
No need to dose again once unloaded.

Use ULTRANEX or MEGANEX? Dose at least 2 weeks after your last dose. StressGuard replaces that dose, it doesn't add to it.

HOW TO DOSE: WITH THE PRODISPENSER

NEVER attach the ProDispenser to a full drum of StressGuard. Don't mix with urea or other products in the water.

1 MEASURE

Work out the mob's total dose using the dose rates here or on the drum. →

2 FILL & CONNECT

Pour into a clean DosingDrum or empty drum, leave approx. 20% air space and attach the ProDispenser.

3 DOSE

Sit it upside down in the trough. It releases over 3 days as water replaces it.

4 LOAD UP

Truck 3 to 7 days later. Empty any leftover tea-coloured liquid into the trough.

SMALL MOB? Dose by hand.

No ProDispenser? Work out the mob's total dose and pour it straight into the trough in **three equal amounts over 2 to 3 days.**

Small pours keep the water palatable so every animal drinks its share. Hay or feed methods are on the website.

DOSE RATES

CATTLE	DOSE P/H
100 - 200 kg	**20 mL**
201 - 300kg	**30 mL**
301 - 400kg	**40 mL**
401 kg + & breeder unit	**50 mL**

SHEEP/GOATS	DOSE P/H
Lambs / kids < 30kg	**2.5 mL**
Lambs / kids > 30kg	**5 mL**
Adult sheep / goats	**10 mL**

SHEEP COST P/H **$0.29** | CATTLE COST P/H **$1.44**

Pricing based on RRP 20L drum **- cheap insurance against the shrinkage and grading penalties a rough trip can cost.**

ACTIVE INGREDIENTS

16 AMINO ACIDS

SEAGRASS / KELP

The building blocks behind immune activity, gut integrity & tissue repair, helping animals rebuild condition once the event passes.

10 TRACE MINERALS

CHELATED

Boron, cobalt, copper, magnesium, manganese, potassium, selenium, sodium, sulphur & zinc.

NATURAL ELECTROLYTES

VIA FULVIC ACID

An elevated load that supports hydration, nerve & muscle function & metabolic stability when intake drops.
